

OMNIGLOT USER GUIDE

Hey there! Thank you for purchasing Omniglot! :D

Let us now guide you on the next steps to make the best use of our plugin.

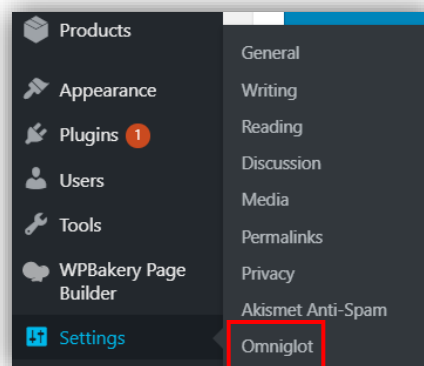

After having successfully completed the purchase you will this email after the order will be marked as completed containing the download link of the plugin

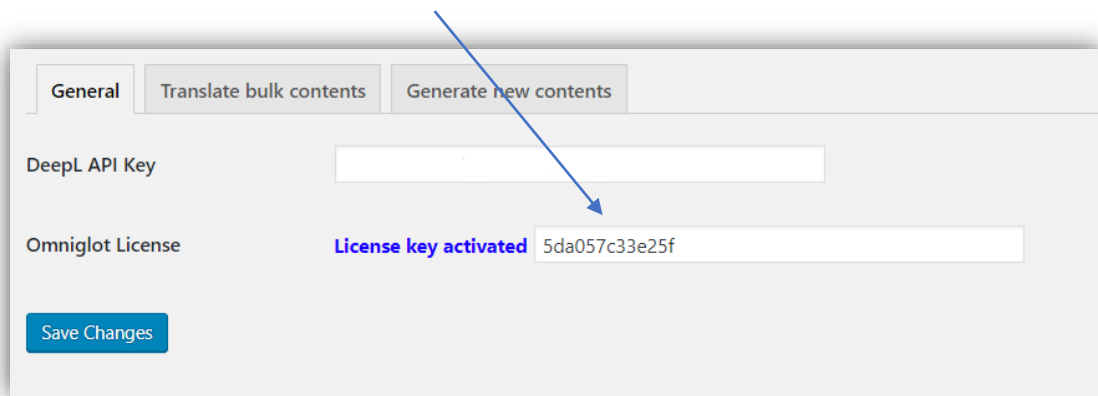

Now please download, install and activate the plugin on your WordPress website.

The second step will be to activate your plugin. For this, you will need to enter your Omniglot license key and your DeepL API key

First, Settings > Omniglot

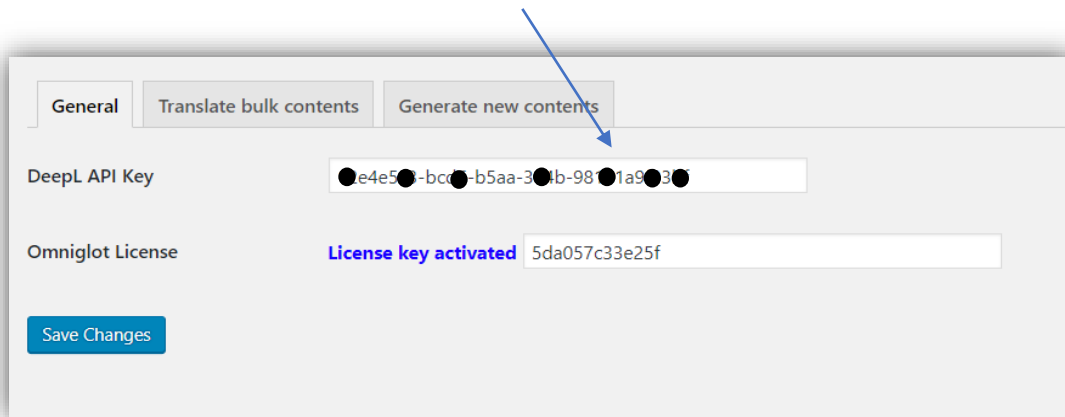

Now, enter your unique Omniglot license key

The screenshot shows a settings panel with three tabs: 'General', 'Translate bulk contents', and 'Generate new contents'. The 'General' tab is selected. It contains two input fields: 'DeepL API Key' and 'Omniglot License'. The 'Omniglot License' field is filled with the text '5da057c33e25f' and is preceded by the text 'License key activated' in blue. A blue arrow points from the text 'Now, enter your unique Omniglot license key' to the 'Omniglot License' input field. At the bottom left of the panel is a blue button labeled 'Save Changes'.

Then enter your DeepL API key

This screenshot is similar to the previous one, showing the same settings panel. However, the 'DeepL API Key' field is now filled with a masked key: 'e4e5-bcc-b5aa-3b-98-1a5-3'. A blue arrow points from the text 'Then enter your DeepL API key' to this field. The 'Omniglot License' field remains unchanged with the value '5da057c33e25f' and the text 'License key activated'. The 'Save Changes' button is still present at the bottom left.

To get your DeepL API key click here and subscribe for a developer plan:

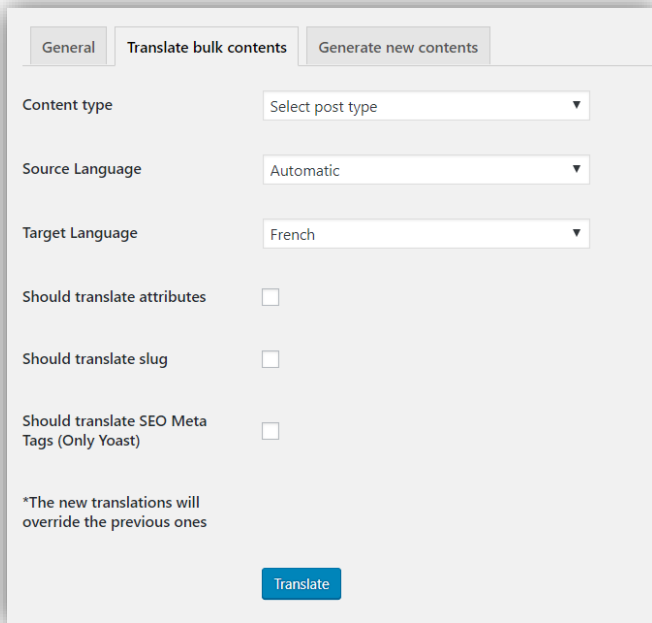

<https://www.deepl.com/pro.html#developer>

If you have purchased the Pro version of Omniglot you can also use the plugin without the DeepL API and insert your translations manually.

Great job! Now you are ready to start using Omniglot! 😊

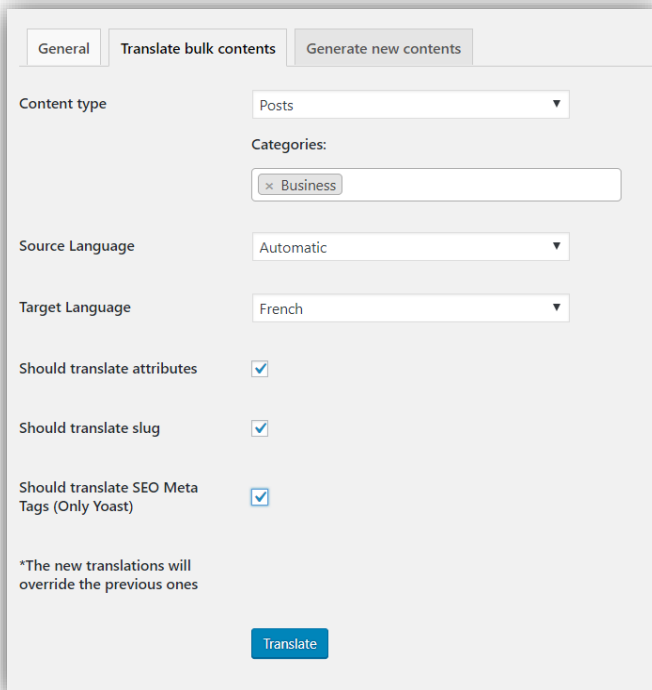

You can use the plugin in 3 different ways:

- 1) You can choose to **translate bulk contents** by overwriting the current translation

The screenshot shows the 'Translate bulk contents' tab in the Omniglot settings. The 'Content type' dropdown is set to 'Select post type'. The 'Source Language' dropdown is set to 'Automatic' and the 'Target Language' dropdown is set to 'French'. The checkboxes for 'Should translate attributes', 'Should translate slug', and 'Should translate SEO Meta Tags (Only Yoast)' are all unchecked. A note at the bottom states: '*The new translations will override the previous ones'. A blue 'Translate' button is at the bottom right.

Choose if you want to translate a page, a post or a product and the category

This screenshot shows the same 'Translate bulk contents' tab but with different configurations. The 'Content type' dropdown is now set to 'Posts'. Below it, the 'Categories:' section has a tag 'Business' selected. The 'Source Language' remains 'Automatic' and 'Target Language' remains 'French'. The checkboxes for 'Should translate attributes', 'Should translate slug', and 'Should translate SEO Meta Tags (Only Yoast)' are now all checked. The same note and 'Translate' button are present at the bottom.

Lastly, choose if you want to translate other elements like the attributes, the slug and the SEO Meta Tags in case you are using the Yoast plugin and click “Translate”.

- 2) Secondly, you can **generate bulk new content** following the same procedure described above. The only difference will be that the new translation will not overwrite the previous one but will appear as a separate content connected with the main one.
- 3) Lastly, you can **choose to translate only specific contents**. To do that, just go on the post, page or product you would like to translate and select the options you prefer on the Omniglot menu on the right side of your WordPress editor

How is Artificial Intelligence Transforming Digital Marketing

It's 2019, and everyone has come a long way in terms of technology. The most popular one is AI (Artificial Intelligence), It has a strong impact on our life in the form of chatbots, smart devices, robotics, and self-driving cars. All of these are made to fulfill the customer's needs and preferences.

What AI is?

AI is the science that deals in building smart and intelligent machines, capable to think and respond like a human. Many organizations are learning AI for making applications

How AI is transforming digital

Omniglot Translator

Omniglot Translation

Translate From: English

Translate to: Portuguese

☒ Should translate attributes

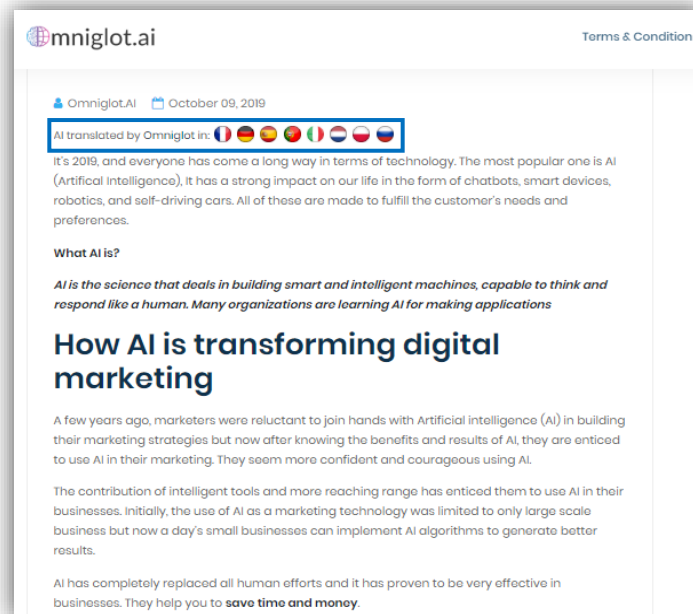

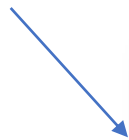

☒ Should translate slug

☒ Should translate SEO Meta Tags (Only Yoast)

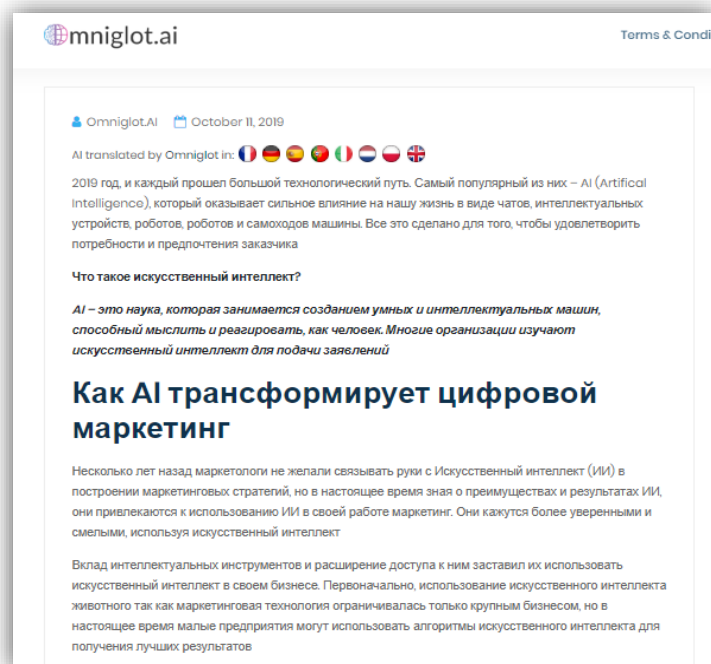

Translate OR **Generate new**

On this section, you can also keep track of the languages in which your content has been already translated

When you will be done translating, in case you generate new content, this is how the final result will look like 😊

By clicking on any flag icon, for example the Russian one, you will be redirected to the Russian version of your article.

Extra features Pro version 🏆

If you have purchased the **Omniglot Pro version**, you will notice some extra useful features such as:

- **Save as a draft option** – In this way you can double check and eventually edit the translations before pushing them live;
- **Multiple translations simultaneously** – You can select to translate to more than one language at same time. Be aware that it might take several minutes;
- **Language prefix and meta name="language" tag** – Perfect for SEO performance;
- **WooCommerce Translations** – Automatically translate your products in no time;
- **Menu Switcher** – Add a widget to your main menu or footer menu and allow your users to easily navigate among the different language available;
- **Blog listing override;**
- **Manual translations:** you don't wanna use DeepL API? No problem you can use the pro version of Omniglot anyway and eventually copy paste your translations from the DeepL online translator 😊 Takes longer but is cheaper 😊
